Scale Model of Trail Segment

Coast To COAST TRAIL FLORIDA

Description

The Coast to Coast Trail model is 1:64 scale and was designed to give the best representation of all overlay design amenities and trail conditions present along the trail. The model displays a typical major or minor trailhead, noting ADA parking and access route, concrete sidewalk to the Coast to Coast Trail, divided asphalt greenway, bridge, fence, landscape palette, pavement markings, kiosk, and wayfinding signage. The model was built out of ½" plywood, chipboard, varying sizes of balsa wood, premanufactured trees, and select model surface building solvents. The finished model is 30" x 40" and includes a clear plastic cover.
